Challenge The Now: Best New Idea

Anthony Wright

Technical Team Lead | Senior Full Stack Software Engineer | AWS
Certified Application Architect
Greater Melbourne Area

Summary

I am a systems-minded senior .NET engineer and team leader who delivers enterprise-grade software that is secure, scalable, and operationally sound. My expertise spans architecture, performance engineering, cloud deployment, DevOps, and leadership, with a proven ability to elevate practices, strengthen standards, and provide long-term value as a technical leader.

Specialising in .NET 8, strong in C# and databases and experienced with JavaScript frameworks, I design and build cloud-native solutions using Clean Architecture, dependency injection, and interface-driven patterns for testability, maintainability, and scalability. I focus on production-ready systems, containerised with Docker, orchestrated through Kubernetes, and instrumented with health endpoints, structured logging via Grafana/DataDog, and Prometheus metrics for observability. My strengths include AWS integration, Cognito oAuth authentication, multi-tenant security, and secrets management. I am highly experienced in gRPC-first API design with REST compatibility, event-driven patterns, and high-performance data access using Entity Framework and Dapper, with emphasis on optimisation, scalability, and operational resilience.

I lead the Mustang Aviation Team at Envirosuite, an environmental intelligence pioneer which is now part of Ideagen, managing five developers within a wider group of fourteen. I spearheaded the upgrade of 200+ legacy .NET projects to .NET 8 during a strategic migration from Windows to Linux-hosted containerised solutions, including CI/CD transitions from BuildKite to GitHub Actions. As a thought leader, I champion AI tools such as Copilot and Claude, creating strategies to avoid pitfalls like circular reasoning and hallucinations, building knowledge bases in Confluence, and delivering talks on embedding AI into workflows. My philosophy is that AI should enhance, not replace, engineering rigour, enabling teams to deliver secure, scalable, and maintainable solutions faster.

Earlier in my career, I consulted for top-tier firms, Microsoft Gold Partners and Microsoft themselves, delivering large-scale applications for Dun & Bradstreet, Commonwealth Bank, and NAB. I built the original Jetstar interface for WebJet and contributed to an in-flight entertainment system for airlines. I have delivered impactful solutions across government, telecommunications, finance, superannuation, and environmental monitoring. Having led teams of up to nine developers, I bring extensive experience in guiding delivery while remaining hands-on in engineering excellence.

Experience

Envirosuite

1 year 11 months

Senior Lead Developer (Mustang Team Lead, Aviation)

November 2023 - Present (1 year 11 months)

Melbourne, Victoria, Australia

As Senior Lead Developer, I manage the Mustang Aviation Team, overseeing five developers within a wider engineering group of fourteen. I lead the design and delivery of enterprise-grade, cloud-native aviation software across a technology stack that includes AWS, React, .NET, Docker, and Kubernetes.

I drive the integration of bespoke environmental monitoring hardware—including noise, aroma, and radar systems—into robust microservices architectures, delivering data efficiently via RabbitMQ queues or S3 storage. I manage international weather feed integrations, leverage shared libraries through NuGet, and ensure all development is structured, maintainable, and scalable.

I actively mentor team members, conduct rigorous code reviews, and foster collaboration across global teams in Australia, Europe, the US, and the Philippines. Working closely with Product Owners, I manage the backlog to prioritise high-value features and enterprise solutions. I have led significant migrations of legacy systems to cross-platform .NET 8 solutions, reducing costs, improving security, and enabling deployment on Linux-based Kubernetes clusters.

I also champion the adoption of AI tools such as Copilot, delivering internal training to over 50 IT staff to optimise developer workflows. My work supports approximately 300 airports worldwide, including clients with highly secure private hosting requirements, demonstrating my ability to balance technical leadership, operational resilience, and enterprise-level delivery.

Acting Principal Software Architect (Aviation)

May 2025 - June 2025 (2 months)

Melbourne, Victoria, Australia

Providing software architecture support to anyone creating solution designs while the Principal Software Architect is on leave for the month.

Acting Software Development Manager

December 2024 - January 2025 (2 months)

Melbourne, Victoria, Australia

In charge of 3 teams of software developers and testers while my boss is on extended leave. Meeting with stakeholders, product owners and dealing with high priority tasks, negotiating releases, keeping the JIRA boards moving, the documentation up to date, while at the same time architecting software solutions.

Future Super

Senior Consultant

October 2022 - August 2023 (11 months)

Melbourne, Victoria, Australia

Future Super - an ethical super fund

- Contributed to the technical merger of smartMonday's applications into the Future Super superannuation ecosystem.
- Successfully migrated 16 applications to the Future Super environment, predominantly in AWS.
- Rewrote some of the application services as Lambdas/Azure Functions.
- Leveraged AWS Step Functions to manage complex workflows.
- Upgraded applications to use Single Sign-On.

XAM Consulting

Senior Consultant

July 2022 - October 2022 (4 months)

Melbourne

Microsoft Gold Partner.

Consulting for Mecca Cosmetics. Hired to convert a monolithic ordering application written in dot net to a microservice application, but ended up upgrading the dot net version to 6.0 and improved the performance.

National Australia Bank

Lead Developer (Group Economics), Solution Designer and Researcher, Project Ginger

July 2017 - June 2022 (5 years)

Melbourne, Australia

Helping the NAB visualise big data using React (NextJS)/Angular dashboards, c#, dot net core, microservices, Azure Functions, Azure Blobs and Tables, SQL server & analysis services, kendo controls, Telerik reporting, Oracle, aggrid.

Artis Group

Senior Consultant

September 2016 - July 2017 (11 months)

Melbourne, Australia

Microsoft Gold Partner.

Working for the Department of Education on a Workforce Management System written in Angular. Utilised technologies such as HighCharts, Leaflet and Bootstrap to provide a great looking, responsive enterprise web application that covers all IT technicians in Victoria.

Utilising Azure Table Storage and Azure Blob Storage on the back-end for storing and retrieving data for processing vacancy applications for Specialist Technicians.

Created an Angular 2v4 application for managing Student Outcomes

WARDY IT Solutions

Senior Business Intelligence Consultant

June 2016 - August 2016 (3 months)

Microsoft Gold Partner

Performed Business Intelligence work for Vision Super during the transition from a legacy web platform to a new web platform, so this job was never intended to be long term. This job was really about ensuring that Vision Super had access to a whole lot of reporting while the new system came on line. As such, I analysed the data and ran queries for the Strategy and Marketing team and Finance team on both the old and new system. Produced reports in SSRS

and Excel, including Pivots. Did searching to obtain members within a radial distance from a given location.

DWS

Technical Team Lead

August 2015 - April 2016 (9 months)

Microsoft Gold Partner

A collaborative Technical Team Lead on a substantial greenfield Angular based enterprise application for Telstra Strategic Pricing that sits on top of the Asp.Net Boilerplate Framework.

Asp.Net Boilerplate is an enterprise-ready application framework built on latest Asp.Net MVC & Web API technologies. It provides easy to use dependency injection, logging, validation, exception handling, localization and so on. It uses many popular frameworks and libraries, including AngularJS, and I added TypeScript and DbUp to this mix.

Asp.Net Boilerplate implements NLayer architecture (Domain, Application, Infrastructure and Presentation Layers) and Domain Driven Design (Entities, Repositories, Domain/Application Services, DTO's...). Also implements and provides a good infrastructure to implement best practices such as Dependency Injection.

Facilitated for a team of 8 senior Agile developers and was also a member of the bigger picture leadership team. Project budget was around \$3 million.

PwC

Development Lead

April 2014 - April 2015 (1 year 1 month)

Dev Lead and technical Scrum Master for a team of developers which includes integration with disparate systems using BizTalk, Web Development (C# MVC .Net & K2) and Sql Server. The application is a new streamlined version of an internal CRM, Time tracking and Billing project, a \$4 million dollar project that returns \$8 million p/a.

Full Application Lifecycle Management (ALM) using Microsoft Team Foundation Server (TFS). Worked through thousands of tasks in the Product Backlog with the Team. Worked on removing impediments from the team, and this included getting my hands dirty performing root cause analysis and

resolving all sorts of issues to ensure the team was able to deliver each sprint. I also did a lot of SQL Server work.

This team was not co-located, with both a Melbourne and a Sydney based team, however we had what was perhaps the best communication system one could wish for, with meeting rooms containing large video conferencing screens, and our desk phones were video phones. Daily Scrum involved the entire team on video screen.

Not being co-located came with its challenges, as did the size of the team. The project was quite large, and there were just under 20 people in the team, which is unusually large for a Scrum Team. The larger part of the team was Sydney based, which was where most of the business functions resided. The Melbourne team was where all the developers, except for K2, were located. So we operated as our own sub Scrum Team to deliver product.

The team includes a sponsoring partner (Product Owner), PM, a Solution Architect, a UI guy, 2 Business Analysts, 3 K2 guys, 4 BizTalk people, 2 SQL Server people, a C#.net MVC developer, 3 testers and myself (the Dev Lead, Lead Sql resource and Scrum Master.)

Hazaa

Managing Director / Principal Consultant

September 2010 - September 2014 (4 years 1 month)

Melbourne, Australia

Microsoft Silver Partner

Responsible for all sorts of areas, from pre-sales through to consulting and programming. We were all expert developers with truckloads of experience in various industry sectors, and I directed the team for around 3 years.

Our approach was Agile Scrum. Applications we built were n-tier applications that used ASP.Net / MVC (Razr) coding in C#. The back-end was SQL Server via LINQ to Entity Framework (EF), both on-premise and Azure. Also heavily utilised Telerik/Kendo controls. Testing was via NUnit. Continuous integration was via TFS Team Build and MSBuild.

I was also involved in building a web site for Camp Australia. They are the largest provider of before and after school care for children. They operate in an environment that has significant compliance requirements. With a team of 4, we built a parent portal so that parents needing to make changes to their

bookings and update details are able to do so with relative ease. The whole platform sat on top of Umbraco CMS.

Also did work for Origin Energy, redirecting AEMO (the energy market wholesaler) data from a .net based application via SAP web services. This involved multi-stage processing that included SSIS.

Wrote an app for a boutique risk analysis and management company. They help companies develop a disaster recovery strategy. Wrote an application for them that automates the process of determining critical disaster recovery points and graphs them on a chart. This is an MVC5 app that uses Entity Framework 6 and the Kendo UI (Telerik) controls.

Finally, wrote an application for a freighting logistics company that tracks Shipments, Orders, Containers, Products and Parts. This was a one-man application entirely designed and written using MVC4 / EF4.3 / SQL Server 2008.

Prima Consulting

Application Architect / Senior Consultant

August 2009 - August 2010 (1 year 1 month)

Microsoft Gold Partner

Architected and developed the Company360 application for Dun & Bradstreet with a team of 5 developers and 1 project manager. I was the Chief Architect on this development.

Company360 provides the most in-depth business information and analysis on Australia's leading 50,000 private and public companies. We integrated financial data, designed and built corporate family trees, implemented company & management biographies and peer analysis.

It involved creating a n-tier architecture separating UI (ASP.Net), UI related business logic, data related business logic and a data layer which used LINQ.

Technologies included: ASP.Net, C#, Forms Authentication, Custom Membership Providers, Intersoft control suite, SQL Server stored procedures, Javascript/JQuery, XML, WCF (SOA) and charting software.

While this site was originally built by a team, I was asked back multiple times to enhance the site. As a result, at the time of my last interaction, I estimate that some 70% of the code within the site was mine.

Thomas Duryea Consulting

Senior Consultant

August 2009 - August 2009 (1 month)

Wrote an interface in C# to synchronise SAP data with Active Directory data for Village Roadshow so that staff data from the SAP system was kept up to date and appears correctly in Microsoft Sharepoint. Also update contacts so that the data appears in a Microsoft Exchange address book.

Wardy IT Solutions

Senior Consultant, SQL Server

June 2009 - July 2009 (2 months)

Implementing SQL Server Best Practices on around 50 Servers for Suncorp Metway Bank in Brisbane, Queensland (filling in for Peter Ward, who was on leave)

Prima Consulting

Application Architect / Senior Developer

June 2008 - June 2009 (1 year 1 month)

Microsoft Gold Partner

Senior Microsoft .net specialist, architected and currently developing a C# ASP.net web site for Dun & Bradstreet (now called Illion) called Company360, with SQL Server, to support 100,000 users across IE6/7/8 and Firefox. Utilising as many of the smarts that .net provides, including menus and sitemaps, security providers, resource folders, also including CSSFriendly controls, Ajax Control Toolkit and Intersoft Web Controls. LINQ to SQL and SQL Stored Procedures, lots of grid, charting and financial analysis work. Wicked drag and drop tree view implementation for parameter selection.

Also implemented a .net web site inside a Sharepoint site for FoodWorks to manage their store promotions.

Finally, was involved in developing in Silverlight for a large telecommunications supplier to major Telcos around the world.

Readify

Senior Developer and Consultant

September 2005 - May 2008 (2 years 9 months)

Microsoft Gold Partner

Worked for Readify consulting to various clients, including working on the Commonwealth Bank's Comsee project, the biggest .Net project in the Southern Hemisphere at the time. Also built the original Jetstar interface at WebJet. C# .net Developer, ASP.Net, SQL Server 2005, AJAX Control Toolkit, SOA/XML Web Services, XML/XSL, FxCop, SQL Server Reporting Services, Subversion, NUnit.

City of Melbourne

Senior .Net Developer (Contract)

February 2005 - September 2005 (8 months)

Developing new systems and providing systems integration

Victorian Automobile Chamber of Commerce

Lead Developer / Senior .Net Developer

July 2001 - December 2004 (3 years 6 months)

Lead Developer for team that wrote a motor industry portal, <http://www.vacc.com.au> and membership management system for the same organisation. Wrote a business keyword search tool including a radial search mechanism. Wrote a shopping application that could cater for 5000 member businesses.

Coles Myer Limited

Senior Developer

February 2000 - June 2001 (1 year 5 months)

Key Developer and consultant for various internal projects. Worked on Time and Attendance and Stocktake for 100+ Kmart and 500+ Coles stores

Praxa

Senior Consultant/Systems Engineer

July 1996 - February 2000 (3 years 8 months)

1996 World-wide Microsoft Partner of the Year

Worked directly for the CTO at Corporate overhauling internal systems and also consulted with clients on major projects. Praxa was the 1996 Microsoft World-wide Partner of the Year'
